BBQ Range

Footprint and profile of 17m² bbq

Profiles of 17m² bbq

The base must be at least 10cm or 4 inches deep. Each side of the octagon must measure 1880mm so that the 1875mm wall piece can sit on top of it comfortably. There must be an air inlet pipe from outside, coming up under the bbq in the centre of the cabin. We recommend that the pipe that is used is as big as possible upto 300mm to ensure that there is ample ventilation while grilling. If you have any questions about the base please give us a call on 07976 399809 and we will be happy to help.
